

Taking Concrete Washout south

Concrete Washout Systems Inc recently announced a signed licensing agreement with Pollution Solutions Inc and Monarch Concrete Washout Inc for the distribution and service of Concrete Washout Systems (CWS) in Southern California.

The licensed partners will own and operate a CWS business in their protected region where they will be responsible for all aspects of the business.

Pollution Solutions Inc (PSI) is a Storm Water Pollution Prevention contractor. It has been servicing the Ventura and Northern Los Angeles County markets since the beginning of 2004 and will open the San Joaquin County market later this year.

Monarch Concrete Washout Inc is a start-up company specifically formed to distribute and service the CWS. It will cover and service the Greater Los Angeles and Orange Counties.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows operators

to washout concrete trucks, pumps and equipment on site and facilitates off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges.

Monarch Concrete Washout Inc's president Mike Koep, said there was a good response from builders, contractors and erosion control professionals.

"I have been in the waste hauling industry my entire career and believe this is one of the most innovative products, unlike anything the waste hauling industry has seen. The CWS gives the waste hauler the opportunity to potentially double their margins compared to traditional waste industry services," Mr Koep said.
