

# The Construction Industry Has a Dirty Little Secret

Wastewater with a pH similar to Drano® spilling into streams, seeping into groundwater: it's happening *right now* on construction sites that lack a clean, reliable process for concrete washout. Yet many builders and environmental officials are unaware of the problem.

Fortunately, there is a simple, builder-friendly solution. Our patented, easily implemented concrete washout process is an EPA best practice, and it even saves builders money.

To learn how Concrete Washout Systems can help prevent water pollution in your area, contact us:
