

Concrete Washout Systems' Aggressive Expansion Continues Into Central California

California Waste Recovery Will Be Servicing Builders and Contractors in Fast Growing California Counties; San Joaquin and Stanislaus

Elk Grove, CA. – March 15, 2005 - Concrete Washout Systems, Inc., announced today that it has signed a licensing agreement with California Waste Recovery Systems (Calwaste) who will distribute and service Concrete Washout Systems (CWS) in San Joaquin and Stanislaus Counties of California.

Calwaste, an established solid waste hauling company led by Dave Vaccarezza, an industry veteran in the waste hauling industry, will begin servicing the San Joaquin and Stanislaus Counties in addition to their current operations. Calwaste was using a similar product to Concrete Washout Systems patent pending invention as they saw the demand and need developing, but realized the value added proposition of a strong partnership with the leading authority in the concrete washout and recycling marketplace.

“California Waste Recovery Systems welcomes the partnership of Concrete Washout Systems to our family of businesses. Together we are poised and ready to meet the challenges of the booming construction Industry in the Central Valley with this new and innovative product,” stated Dave Vaccarezza, Owner of California Waste Recovery Systems.

“We are very excited to have an industry veteran with Dave’s accomplishments and experience come aboard, realizing the value and opportunity in our business model,” stated Kevin Mickelson, Vice President of Concrete Washout Systems, Inc. “Calwaste has a proven and distinguished track record within the waste hauling industry and with its customer base we feel they are a great addition and asset to our business,” added Mr. Mickelson.

CWS is currently seeking licensed partners in numerous markets across the nation. Each partner will own and operate a Concrete Washout Systems business in their designated region, where they will be responsible for all aspects of the business.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application as concrete material is diverted away from landfills and recycled. This system replaces other outdated washout BMP’s, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

About Concrete Washout Systems, Inc.

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
