

Concrete Washout Systems, Inc. Continues It's Rapid Expansion Into Northern California

Strategic Partner Begins Servicing Builders and Contractors in Fast Growing California Counties; Placer, Yuba and Sutter

Elk Grove, CA.-June 4, 2004 - Concrete Washout Systems, Inc., announced today that it has signed a licensing agreement with American Concrete Washouts, Inc. (ACW), who will distribute and service Concrete Washout Systems (CWS) in Northern California.

American Concrete Washouts, Inc., a start-up company specifically formed to distribute and service the CWS, began servicing the fast growing Placer County market at the beginning of May 2004. The Concrete Washout Systems have been well received by construction professionals and ACW has deployed approximately 40 boxes in less than one month in Placer County, prompting their expansion into neighboring Yuba and Sutter Counties.

“The response we have seen from the building industry has exceeded even our highest expectations and forecasts. Being located in and around one of the fastest growing areas in the Nation affords us the opportunity to grow our business rapidly,” stated Mike Liston, President of American Concrete Washouts, Inc. “Our initial focus was to center our business around the Placer County market. With the tremendous demand we are seeing, we felt we needed to expand into the surrounding counties and shortly, into the Reno, Nevada market,” added Mr. Liston.

“We are on pace in reaching our expansion goals for California by the end of this year.” stated Kevin Mickelson, Vice President of Concrete Washout Systems, Inc. “ACW has stepped into one of the fastest growing areas in the Nation and has seen tremendous interest develop, prompting them to expand into additional markets earlier than expected,” added Mr. Mickelson.

Licensed partners will own and operate a Concrete Washout Systems business in their designated region where they will be responsible for all aspects of the business.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application. This system replaces other outdated washout BMP's, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

About Concrete Washout Systems, Inc.

Concrete Washout Systems is striving to become the industry standard in concrete washout removal and recycling. The patent-pending Concrete Washout Systems provides a cost effective and environmentally friendly alternative for homebuilders and contractors.
