

Concrete Washout Systems, Inc. Expands Its Presence Into The East Bay Area of California

Strategic Partner, American Concrete Washouts, Inc., Begins Servicing Builders and Contractors in California Counties; Solano, Sonoma and Napa

Elk Grove, CA.-September 13, 2004 - Concrete Washout Systems, Inc., announced today that it's partner, American Concrete Washouts, Inc. (ACW), will begin distributing and servicing the Concrete Washout Systems (CWS) in the East Bay counties of California.

American Concrete Washouts, Inc. (ACW) began servicing the Concrete Washout Systems in beginning of May 2004 in the Placer, Yuba and Sutter Counties of California.

"To date, we have seen unprecedented growth and have exceeded our expectations two-fold in less than four months of operations. We continue to see the increased demand from the construction and regulatory industry and feel our expansion into the East Bay market will fit nicely in our current growth plan," stated Mike Liston, President of American Concrete Washouts, Inc. "We continue to provide our current customer base top quality service and look forward to developing new relationships as we expand," added Mr. Liston.

"ACW has been our top performing partner thus far and has exceeded our expectations, deploying and servicing almost 100 CWS boxes in their initial market in less than four months," stated Kevin Mickelson, Vice President of Concrete Washout Systems, Inc. "Demand has increased exponentially in these areas prompting ACW to continue their aggressive expansion," added Mr. Mickelson.

Licensed partners will own and operate a Concrete Washout Systems business in their designated region where they will be responsible for all aspects of the business.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application. This risk management system replaces other outdated washout BMP's, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

About Concrete Washout Systems, Inc.

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
