

Concrete Washout Systems, Inc. Rapid Expansion Moves Them Into Central California

JWT Site Management Will Begin Servicing Builders and Contractors in Fresno and Madera Counties of Central California

Elk Grove, CA.- March 30, 2005 - Concrete Washout Systems, Inc., announced today that it has signed a licensing agreement with JWT Site Management of Clovis, California, who will distribute and service Concrete Washout Systems (CWS) in the Central California counties of Madera, Fresno, Kings and Tulare.

JWT Site Management currently operates as a construction site management company providing a full compliment of erosion control and storm water pollution prevention services to contractors, builders and developers.

“JWT Site Management is eager to be the distributor for Concrete Washout Systems to contractors and developers in Central California. As the needs of contractors and developers grow, there is no question that the concrete washout bins will be a great addition in staying compliant with SWPPP,” stated Bart Jones, owner of JWT Site Management. “With the positive feedback we have already received, we feel the demand for concrete washout bins will be overwhelming. In addition, we look forward to building a strong business relationship with Concrete Washout Systems,” added Mr. Jones.

“We are excited to have JWT on board as a partner. Their existing business relationships, understanding and knowledge of the erosion control industry will help propel their transition into this new niche market,” stated Kevin Mickelson, Vice President of Concrete Washout Systems, Inc. “The potential in their market is untapped and there has been tremendous interest developing due to state and regional stormwater and waste diversion regulations. JWT will be providing a much needed risk management solution and providing a value added service to compliment their current services,” added Mr. Mickelson.

CWS is currently seeking licensed partners in numerous markets across the nation. Each partner will own and operate a Concrete Washout Systems business in their designated region, where they will be responsible for all aspects of the business.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application as concrete material is diverted away from landfills and recycled. This system replaces other outdated washout BMP’s, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

About Concrete Washout Systems, Inc.

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
