

Concrete Washout Systems, Inc. Rolls Into The Grand Canyon State

Washout Systems, LLC Has Begun Servicing Builders and Contractors in the Greater Tucson, Arizona Market

Elk Grove, CA. - July 26, 2005 - Concrete Washout Systems, Inc., announced today that Washout Systems, LLC (Arizona) has recently began distributing and servicing Concrete Washout Systems (CWS) in Cochise, Pima, Pinal and Santa Cruz Counties of Arizona.

Washout Systems is a newly formed company operating under the guidance of Brian Ham, president of Santa Rita Landscape, one of Southern Arizona's largest landscape companies established in 1985.

"Finally South and Central Arizona have an economical solution to a problem that has been a burden to the construction industry for many years," stated Brian Ham, President of Washout Systems LLC. "Not only does Concrete Washout Systems solve the compliance issues but it's the simplicity and housekeeping that will impress our customers," added Mr. Ham.

"We are very excited to have Mr. Ham as a licensed partner in Southern Arizona," stated Kevin Mickelson, Vice President of Concrete Washout Systems, Inc. "Mr. Ham has a well established business and understands the importance of continuing to provide his customers with products and services to assist them in managing their overall risk relating to storm water and erosion control," added Mr. Mickelson.

CWS is currently seeking licensed partners in numerous markets across the nation. Licensed partners will own and operate a Concrete Washout Systems business in their designated region where they will be responsible for all aspects of the business. Currently Concrete Washout Systems has licensed partners throughout most of California, Hawaii, Las Vegas and Reno, Nevada, Phoenix and Tucson, Arizona, Denver, Colorado and Southeast Florida.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application as concrete material is diverted away from landfills and recycled. This system replaces other outdated washout BMP's, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

About Concrete Washout Systems, Inc.

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
