

Concrete Washout Systems, Inc. Goes Rampless

Innovative Rampless Concrete Washout Systems™ Container To Compliment and Add Versatility for Jobsites

Elk Grove, CA.-May 2, 2005 - Concrete Washout Systems, Inc., (CWS) announced today that it has developed a new rampless version of its pioneering and patent pending product, Concrete Washout Systems™ container.

The new rampless container is essentially a stripped version of the flagship Concrete Washout Systems™ container, with the ramps removed. The new container will have more holding capacity at six (6) cubic yards and have the ability to hold more washwater on the jobsite, up to 400 gallons more. The new rampless version can be configured with hook points for craning the box onto commercial high-rises to add even more options for clients.

“The rampless box was put into production to continue providing our customers with the best available technology and as a direct result of feedback obtained from the customers and end users on the jobsites,” stated Mark Jenkins, President of Concrete Washout Systems, Inc. “The rampless box is not a replacement for our flagship ramped box, but a complimentary tool when more than one box is needed on a jobsite or when there are no concrete pumps being used. The added versatility will allow our customers the opportunity to use our patent pending systems on various applications where before, they had very little if any compliant options available” added Mr. Jenkins.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application. This system replaces other outdated washout BMP's, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

About Concrete Washout Systems, Inc.

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
