

## **Concrete Washout Systems, Inc. Signs Exclusive Agreement With the Nations Largest Waste Container Manufacturer**

### *Wastequip Will Begin Manufacturing and Marketing Concrete Washout Systems Containers*

Elk Grove, CA.-April 14, 2005 - Concrete Washout Systems, Inc., (CWS) announced today that Wastequip Manufacturing, the nations largest solid and liquid waste container manufacturer, has signed an exclusive agreement and will begin manufacturing and marketing the patent pending concrete washout systems containers.

Wastequip, Inc. is headquartered in Cleveland, Ohio. Since its founding in 1989, Wastequip has become one of the largest manufacturers, designers, and marketers of equipment to collect, process, and transport solid and liquid waste materials. The company's products include a variety of metal containers used for the collection of waste materials, balers, compactors, roll-off hoists, and vehicle mounted vacuum units. For more information visit <http://www.wastequip.com> .

“We welcome the opportunity to work with Concrete Washout Systems, Inc. in providing the building trades and concrete industries with a quality, cost-effective, and environmentally compliant alternative to their concrete washout needs,” stated Bob Rasmussen, president and chief executive officer of Wastequip.

“We are very pleased to have Wastequip as an exclusive manufacturing and marketing partner with the market share they represent. With our other exclusive manufacturer for the west coast, we have aligned ourselves with the two largest container manufacturers in the United States,” stated Mark Jenkins, President of Concrete Washout Systems, Inc. “Wastequip is at the forefront of their industry because they maintain a strong commitment and personal interest with their clients and they seek out new technologies, such as ours, that impact their client’s business and ultimately their client’s bottom line. We believe with their assistance and our aggressive expansion plans, we will have operations in most if not every state within a relatively short period of time,” added Mr. Jenkins.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application. This system replaces other outdated washout BMP’s, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

### **About Concrete Washout Systems, Inc.**

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
