

## **Concrete Washout Systems Selected by Hanley Wood's World of Concrete 2006**

*Essential Risk Management Solutions to be Provided for the Trade Show*

Elk Grove, CA., January 12, 2006 - Concrete Washout Systems, Inc., (CWS) announced today that Hanley Wood's World of Concrete 2006, has enlisted the assistance of Concrete Washout Systems to assist in their overall risk management and compliance plans relating to concrete washout as well as participation in the Mack Ready Mix Driving Skills Challenge for their upcoming show

World of Concrete 2006, the leading marketplace for the \$84 billion industry, is the largest annual international construction tradeshow, where commerce and construction converge and will be hosted at the Las Vegas Convention Center during the week of January 17-20.

CWS will be providing concrete washout and washwater containment services through their Las Vegas partner, Washout Systems and will be providing a Concrete Washout Systems container for the Mack Ready Mix Driving Skills Challenge and Mason's Challenge. CWS will be in booth number N865. For more, visit [www.worldofconcrete.com](http://www.worldofconcrete.com).

World of Concrete 2006 will be attended by such companies as; Caterpillar (NYSE: CAT), Case (NYSE: CNH), CEMEX (NYSE: CX), Cummings (NYSE: CMI), Trimble (NASDAQ: TRMB), Terex (NYSE: TEX), Peterbilt (NASDAQ: PCAR), Ingersoll-Rand (NYSE: IR), Weyerhaeuser (NYSE: WY), Putzmeister America and Schwing.

CWS is currently seeking licensed partners in numerous markets across the nation. Licensed partners will own and operate a Concrete Washout Systems business in their designated region where they will be responsible for all aspects of the business. Currently Concrete Washout Systems has licensed partners throughout most of California, Hawaii, Las Vegas and Reno, Nevada, Phoenix and Tucson, Arizona, Denver, Colorado and Southeast Florida, Minnesota and Texas.

The patent pending CWS is a portable, self-contained and watertight bin that controls, captures and contains concrete washout material and wastewater. It allows trade personnel to easily washout concrete trucks, pumps and equipment on site and facilitates easy off site recycling of the same concrete materials and wastewater, while protecting the storm drain system from potential illegal discharges. The off site recycling component creates an even more environmentally sound application as concrete material is diverted away from landfills and recycled. This system replaces other outdated washout BMP's, which are costly, unsightly and damaging to the environment since their containment value diminishes, due to inherently faulty material, over use and lack of maintenance.

### **About Concrete Washout Systems, Inc.**

Concrete Washout Systems is a risk management specialist and industry pioneer in concrete washout and wastewater removal, treatment and recycling. The patent-pending Concrete Washout Systems provides a cost effective, environmentally friendly and compliance alternative for homebuilders, contractors, ready mix and pump operators and environmental engineering firms.
